

Quarterly Safety Report

This report summarizes site inspection findings for the third quarter. All inspected sites passed the baseline safety checklist with no critical violations recorded during the review period.

Two minor issues were noted at the north entrance: a missing warning sign and a partially blocked fire exit corridor.

Corrective action has already been taken for both issues, and a follow-up inspection is scheduled for next month.

Recommendations

Site managers should review the updated signage checklist before the next quarterly audit, and confirm all fire exits remain clear throughout the shift, not only during scheduled inspections.
